

SPORTS SOLUTION

BASEBALL & SOFTBALL

Automate the streaming of matches on YouTube.

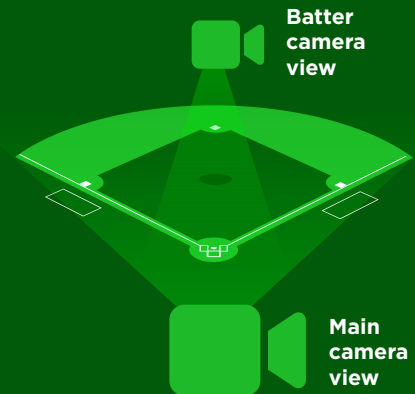

All you need are two Axis cameras and CamStreamer.

Imagine a broadcast where the cameras switch themselves as the game goes on... all with just two Axis cameras and the CamStreamer Sports Solution.

✔ Automatic camera switching

Using Deep Learning technology, the trained camera captures the entire pitch and the pitchers with it. Based on software detection, it knows when a pitch is being thrown. At that moment, it switches to the second camera, which takes a close-up frontal view of the batter. Up to five cameras in total can be connected to the system, only the other three can be switched manually.

✔ Display scores in video

Thanks to the integration of the BallClubz scoring platform used by the World Baseball and Softball Confederation, the status of the game is updated in real time. However, scores can also be entered manually.

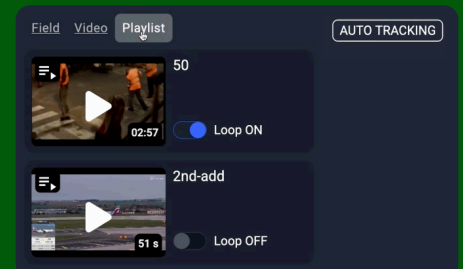

✔ Key moments

Each broadcast match is also recorded. Key moments during the game, such as a hit or a home run, can be marked in the recording and exported as a montage.

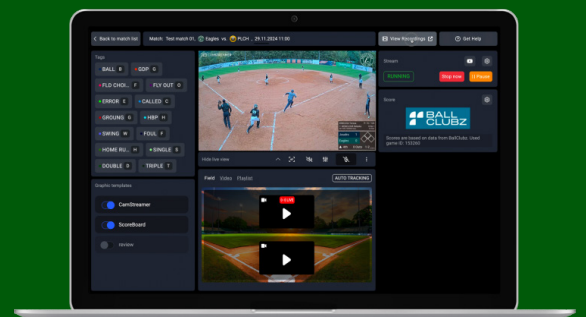

✔ Advertising space

During breaks, you can easily switch to ad jingles or prepared videos. The image can be supplemented with sponsors' logos.

✔ Friendly UI and mobile app

Everything is controlled through a clear user interface, which is available both in the browser and in the mobile app. This makes it possible to control the streaming of the match from anywhere. You can also comment on the match directly from the interface, e.g. via connected bluetooth headset with a microphone.
