# CLOUD SOLUTIONS

# How do our Cloud Solutions work?

Connect your Axis cameras to the CamStreamer Cloud and enjoy the main benefit – all your Axis cameras can be controlled in one place anywhere you are. **Manage cameras**, go to **device settings** or to **CamStreamer apps**.

The connection between the camera and CamStreamer Cloud doesn't require a public IP address or Virtual Private Network (VPN). All communication is **encrypted, private** and **secure**. Connect from anywhere you want.

Cloud platform actively checks 200+ device related parameters. Customizable **watchdog** alerts notifies you when your camera is disconnected, has a failure, full memory, or when other services do not work properly.

This cloud solution provides **several services** and the combination is only up to you. The following services are available: camera Remote Access, Recordings, TimeLapse and remote control of CamStreamer apps.

Any questions? Reach out to us today. We are here to help.
